DETAILED ACTION

Specification

1. The disclosure is objected to because it contains an embedded hyperlink and/or other form of browser-executable code (see page 1 of the present application).

Applicant is required to delete the embedded hyperlink and/or other form of browser-executable code. See MPEP § 608.01.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claim 17, the recitation "said measuring unit" lacks clear antecedent basis.

In addition, "a four message" should be changed to --a fourth message--.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 12-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

As to claim 12, the recitation "A service providing program which makes a computer operate the steps of comprising" at lines 1-2 is directed to non-statutory subject matter, namely a program.

In order to overcome this rejection, it is suggested that the above recitation "A service providing program which makes a computer operate the steps of comprising" should be changed to –A computer readable medium encoded with a computer program which makes the computer operates the service providing steps of comprising--.

As to claims 13-20, they are rejected for the same reasons as set forth in claim 12 above.

Allowable Subject Matter

6. Claims 1-11, 21 are allowed.

As to claims 1-11, 21, Holtschneider (US 2006/0046719 A1) discloses establishing a long range communication using connection information from a short range communication (see figure 6). Holtschneider, however, is not a proper prior art against the claimed invention because the claimed invention has a earlier filing date. Palin (US 7,158,756 B2) teaches away from the claimed invention. More specifically, Palin discloses establishing a short range communication using connection information from a long range communication (see abstract). Therefore, the prior art of record fail to disclose or render obvious providing services using long range and short range communications as specified in claims 1-11 and 21.

Conclusion
